**Environmental
Data Management
Solutions**

Environmental Data Management Solutions for Today's Managers

Concern for environmental impact and regulatory compliance has never been greater, and as the costs of poor environmental performance increase, managers need to implement more efficient technologies to stay on top of these issues.

*Would your current system pass a 'due diligence' audit
in the event of an environmental incident?*

GemTeck's scalable enterprise-level software makes use of leading-edge database technology to maintain complete data integrity, through rigorous data validation processes, and offers complete data security, auditability and reporting capabilities.

For any time-based monitoring...EQWin is the solution!

EQWin software will assist you in scheduling and planning your entire sample monitoring process and efficiently manage the volume of data generated from diverse environmental monitoring programs.

For air, water, sediment, contaminated soil, aquatic, biological, and even meteorological monitoring, the EQWin suite of products will save you valuable time in planning, handling, interpreting, visualizing and reporting on data from such sensitive environments.

WWW.GEMTECK.COM

GemTeck Environmental Software Ltd.* specializes in the development of commercial software and custom development services pertaining to the management of environmental data.

* A joint venture between Teck Cominco Limited and Gemcom Software International Inc.

Why Use EQWin?

- ❖ **Reduces Costs:** Through continuous professional development and cost-sharing, the total cost of ownership of EQWin is significantly less than any "in-house" or third-party designed system.
- ❖ **Ensures Data Quality:** Rigorous data validation and quality control procedures ensure data accuracy and consistency, by eliminating the many errors that are often overlooked in other systems.
- ❖ **Single-Source Data Archive:** All data derived from disparate data files and formats, from isolated and incompatible sources, are stored in a single, powerful database for ease of retrieval and interpretation.
- ❖ **Maintains Continuity:** Software design/technology is continually upgraded, whereas custom "in-house" systems notoriously suffer when technologies change, and when key personnel move on.
- ❖ **Ensures Speed and Flexibility:** EQWin's sophisticated query builder and filter ensures fast and flexible data retrieval, and facilitates advanced custom regulatory compliance reporting on the fly!
- ❖ **Saves Time and Increases Productivity:** Reduces the time required for handling, interpreting and retrieving data, and frees up engineers to focus on other equally important environmental tasks.

Technology

GemTeck develops leading-edge, Windows-based, scalable, data management software. The database independent multi-tier, client/server architecture facilitates efficient multi-user access across local and global networks (LAN/WAN). Using XML, EQWin is designed for use on Microsoft NT Servers running Microsoft Internet Information Server™ (IIS) on a TCP/IP network. This new design facilitates customized VBA™ development.

EQWin supports Microsoft JET/Access for desktop use, and SQL Server/Oracle for enterprise-level systems, where data security, integrity, auditability, sharing and scalability are considered top priority. Full integration with Microsoft EXCEL allows users to work in a familiar environment for data import, validation, interpretation, analysis and reporting, *making the need for data export obsolete!*

EQWin Suite of Products

EQWin is specifically designed for desktop and enterprise-level use, for the efficient management of entire monitoring programs. This includes planning, scheduling, validation, interpretation, visualization and reporting on environmental data.

EQWin Standard

This single-user desktop system is designed for independent operations for importing, validating, analysing and reporting on data from a variety of environmental monitoring programs.

EQWin Data Manager

This feature-rich, technologically advanced system addresses more demanding data management needs. It captures a significant amount of information, and places greater emphasis on data integrity, security, sharing, scalability and custom development.

EQWin Sample Manager

This software manages the entire sample taking process of scheduling, planning, notification, chain of custody and sample-bottle labels, with calendars, reminders and confirmations.

GIS Interfaces

These interfaces are used to visualize selected data on ArcView and MapInfo maps, by directly accessing time-based environmental data stored in EQWin databases.
